

Art: 3D dinosaurs

Wire creates a stable base shape for the 3D dinosaur. It can be easily manipulated into the shapes you want.

Tinfoil is used to connect the limbs and make the structure more stable and to strengthen the joints.

Tissue paper and tinfoil are used to build up the shape of the body of the dinosaur.

The whole dinosaur body should be covered in tinfoil which creates texture for the skin of the dinosaur, before being painted to show highlights and shadows.
