Rocks

Key Vocabular				
igneous rock	Rock that has been formed from magne or lava.			
sedimentary rock	Rock that has been formed by layers sediment being pressed down hard ar sticking together. You can see the laye of sediment in the rock.			
metamorphic rock	Rock that started out as igneous or sedimentary rock but changed due to being exposed to extreme heat or pressure.			
magma	Molten rock that remains underground.			
lava	Molten rock that comes out of the ground is called lava.			
sediment	Natural solid material that is moved and dropped off in a new place by water or wind, e.g. sand.			
permeable	Allows liquids to pass through it.			
impermeable	Does not allow liquids to pass through it.

Key Knowledge							
There are three types of naturally occurring rock.							
Igneous	Metamorphic						
	Natural Rocks	Human-Made Rocks					
Igneous	Sedimentary	Metamorphic	RUCRS				
Obsidian	Chalk	Marble	Brick				
	RE STOL						
Granite	Sandstone	Quartzite	Concrete				
AZT		AL AN					
Basalt	Limestone	Slate	Coade Stone				

Some words you might use to discuss the properties of a rock:

hard, soft, **permeable**, **impermeable**, durable (meaning resistant to weathering), high density, low density. Density measures how 'bulky' the rock is (how tightly packed the molecules are).
